1. Introduction

1.1 Synopsis

The objective of this report is to give readers an overview and analysis of the Hospital Registration System, which is intended to improve and streamline the registration and management of both patients and doctors registered with the hospitals. This system automates a variety of registration and management procedures while ensuring seamless data management in an effort to increase productivity, accuracy, and overall user experience.

The initial interaction between patients and the healthcare institution is made easier by the Hospital Registration System, which is an essential part of the larger Hospital Management System. It features a number of functions, such as the gathering of doctor and patient data, the scheduling of patient appointments, and administrative procedures for the registration and management of patients and doctors.

1.2 Problem Statement

Hospital Registration plays a major role between patients and healthcare facilities. As time goes on, technology has evolved to enable many systems to go online . The Hospital Registration System also needs to integrate with the online system in parallel with the modernization. The traditional approach of the Hospital Registration System gives rise to some of the problems such as inflexibility of adding and removing new data. The traditional Hospital Registration system requires the administrator to manually enter the information of the patient and doctor in the hospital and manually sort the information in alphabetically to ease of finding specific information in the future.

Not to forget, in order for the patient to make an appointment with the doctor, the patient has to come to the hospital and fill in the desired date for the information. This is inefficient for the patient that wants to make an appointment as some of the patients require them to travel far to make an appointment.

1.3 Objectives and Scope

The Hospital Registration System was developed to ease the process of registration physically. With the Hospital Registration System, patients are able to do registration and scheduling appointments from home and also can use some extra features in the application. The following are the objectives of the proposed system.

1. Simplify the registration process by providing a user-friendly application that streamlines the process of registration and scheduling appointments for the patients.
2. Provide flexibility for the administrator when adding new patients or doctors and deleting existing patients or doctors in the system.
3. Provide operational efficiency by automating various processes required for registration and scheduling appointments.
4. Provide a report required for the administrator for better analysis of patients and doctors registered in the system.

2. UML Description

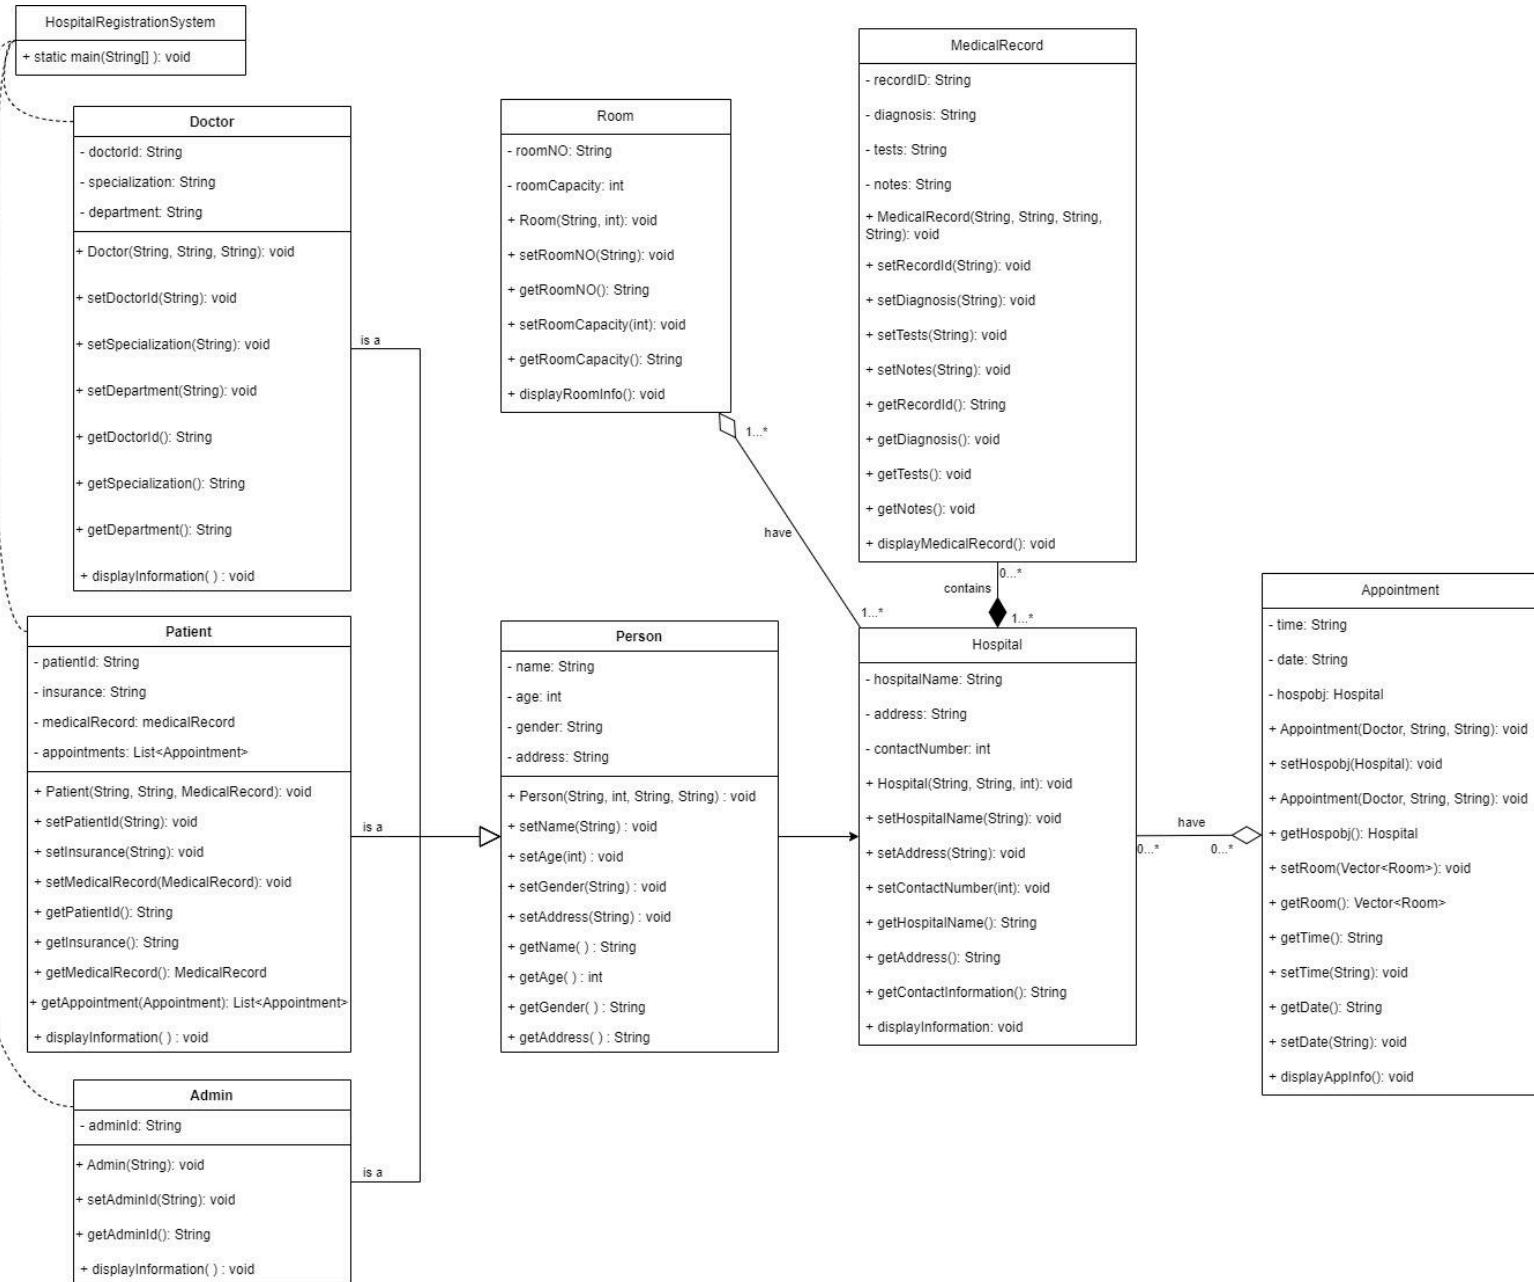

Figure 1: UML class diagram for Hospital Registration System

Description for each class:

Class	Attribute	Description
HospitalRegistrationSystem	static main(String[])	Main function of the system
Person	name	Name of the user
	age	Age of the user
	gender	Gender of the user
	address	Address of the user
Doctor	doctorId	Unique identifier for each doctor
	specialization	Expert domain of the doctor
	department	Department where the doctor belongs
Patient	patientId	Unique identifier for each patient
	insurance	To confirm if the patient has insurance or not
	medicalRecord	To record the history of the patient
	appointment	To store the appointment scheduled for the patient
Admin	adminId	Unique identifier for each admin
Hospital	hospitalName	Name of the hospital
	address	Address of the hospital
	contactNumber	Contact number of the hospital
Room	roomNo	Unique identifier for each room in the hospital
	roomCapacity	Capacity of the room to accommodate the patient
MedicalRecord	recordID	Unique identifier for each

		medical record stored in the system
	diagnosis	Diagnosis of the patient
	tests	Tests carried out on the patient
	notes	Notes about the patient for doctor reference
Appointment	time	Time of the appointment
	date	Date of the appointment
	hospobj	Hospital object to access the function of Hospital class

3. Implementation

3.1 Technologies Used

To be able to complete this project we have used several technologies. All the description of the technologies used is as below:

- 1) IDE : Visual Studio Code (version 1.79) & replit.com
- 2) Programming Language: Java (JDK 20.0.1)
- 3) Additional Libraries & Framework:
 - java.util.*
 - java.util.List
 - java.util.Scanner
 - java.io.File
 - java.io.FileNotFoundException
 - java.util.Vector
 - java.util.ArrayList

3.2 Development Environment

1. **Integrated Development Environment (IDE):** The development environment for this project is Visual Studio Code. Visual Studio Code provides a wide range of features, from debugging tools, intelligent code completion, refactoring capabilities, and a variety of frameworks.
2. **Java Development Kit (JDK) :** The latest version of Java Development Kit (JDK 20) was used for this project. The JDK provides the Java compiler, runtime environment, and necessary frameworks and libraries needed to develop Java applications.
3. **Version Control System :** For this project Git was used as a version control system for this project. It was used to keep track of the code changes and communicate with team members.

4. **Collaboration tools:** To improve team efficiency of the team, several collaboration tools were used such as Replit and VSCode LiveShare. Besides that Google Meet were used for online communication platforms and Google Docs were used for documentation.

3.3 Features Implemented

Key Features	Description
Object-Oriented Programming (OOP)	The system is built implementing the multiple core principles of Object-Oriented Programming (OOP) which are Polymorphism, Aggregation, Composition, Inheritance, and Association. This system also implements Vector to add flexibility, and extensibility for the system.
User Authentication	There are three different roles of users who use this system which are Admin, Patient and Doctor. To authenticate each user when they are logging into the system, the system will prompt the user to enter their credentials to authenticate the user registered to the system.
Exception Handling	Exception handling was also implemented in the system. One of the exception handling is handling input errors from the user when entering information. Other than that, the system will also handle whether the text file for the system exists or not.
Text file	To enable the system to store information of the users, text file is used to store the information. The text file included for the system are “Patient.txt” and “Doctor.txt”.
Automatic password generator	Each time the admin adds a new user, the system will auto generate a password for the user.
Polymorphism	Polymorphism is implemented in the Patient, Doctor and Admin class. The polymorphism function is displayInformation(). Each function will display a different output based on the object calling the function.
Flexibility	For flexibility of the system, the system implements Vector to store the data of the user. The Vector enables the admin to add or remove patients or doctors based on the index.

4. User Interface

4.1 Welcome Page

```
=====  
=          Welcome to the Hospital Management System      =  
=  
= This system allows you to manage various aspects of a hospital, including: =  
=           - Managing doctor and patient records       =  
=           - Scheduling appointments                  =  
=           - Viewing medical history                 =  
=  
=====  
Press Enter to continue...  
█
```

When the user first accesses the system, the Welcome Page will pop up on the screen.

The welcome page will display the functions of the system.

4.2 Administrator Functions

```
=====
=           Welcome to the User Page           =
=====
Please choose which user you want to log in as:
[1] Admin
[2] Patient
[3] Doctor
[4] Exit
Please enter your choice: 1
```

Then, the system will display the user page. There are three types of users who can access the page which are Admin, Patient and Doctor. The user can also choose to exit the system. Firstly, we will start with the Admin. Admin will input ‘1’.

```
=====
=           Administrator Login Page           =
=====

Email    : ismail@gmail.com
Password : ismail1234
```

At the administrator login page, the admin will be prompted to enter their email address and password.

```
=====
=                         Administrator Login Page
=====
Email      : ismail@gmail.com
Password   : ismail1234

Login Successful. Redirecting to the Dashboard. Please wait
Press Enter to continue...
|
```

If the admin inputs the correct email and password, the page will indicate that the login is successful and the admin can access the dashboard.

```
=====
Hello Ismail Bin Ahmad
=====
=                         Welcome to the Administrator Page
=====
Here is the list of what the administrator can do
[1] Display Admin Information
[2] Add Patient
[3] Delete Patient
[4] Add Doctor
[5] Delete Doctor
[6] View all patient
[7] View all doctor
[8] Return
Please enter your choice: 1|
|
```

In the administrator dashboard, the system will display the functions that the admin can access to. Here, we'll start with choosing '1'.

```
=====
=                         Personal Information Page
=====
Here is the information about Ismail Bin Ahmad
Admin name : Ismail Bin Ahmad
Age        : 34
Gender     : Male
Address    : Jalan Wong Ah Jang, 25200, Kuantan, Pahang
Admin ID   : A001
Press Enter to continue...
|
```

These are the admin informations that will be displayed which includes the admin name, age, gender, address and admin ID. Admin can only view their own personal information.

```
Hello Ismail Bin Ahmad
=====
=          Welcome to the Administrator Page      =
=====
Here is the list of what the administrator can do
[1] Display Admin Information
[2] Add Patient
[3] Delete Patient
[4] Add Doctor
[5] Delete Doctor
[6] View all patient
[7] View all doctor
[8] Return
Please enter your choice: 2
```

Next, we're going to choose option '2'.

```
=====
=          Add Patient Page      =
=====
Patient name      : Izzara Raisya
Patient age       : 9
Patient gender    : Female
Patient address   : Batu Uban, Pulau Pinang
Patient Id        : P004
Patient insurance : KPJ Insurance
```

The admin can input the following patient details. Each patient will have their own unique patient ID.

```
Hello Ismail Bin Ahmad
=====
=          Welcome to the Administrator Page          =
=====
Here is the list of what the administrator can do
[1] Display Admin Information
[2] Add Patient
[3] Delete Patient
[4] Add Doctor
[5] Delete Doctor
[6] View all patient
[7] View all doctor
[8] Return
Please enter your choice: 6
```

Next, we're going to choose option '6' after inputting the patient details.

```
=====
Here is the information about Mazenah
Patient name : Mazenah
Age          : 26
Gender        : Female
Address       : Johor
Patient ID   : P002
Insurance     : Not registered

Medical Record History
Medical Record ID : R002
Diagnosis        : Headache
Tests            : Surgery
Notes            : Critical

(3)
=====

Address       : Batu Uban, Pulau Pinang
Patient ID   : P004
Insurance     : KPJ Insurance

No Medical Record History
Press Enter to continue...
```

Here is the list of patients that are currently in the system. Note that patient 3 and patient 4 are the ones that were input by the admin.

```
Hello Ismail Bin Ahmad
=====
=          Welcome to the Administrator Page          =
=====
Here is the list of what the administrator can do
[1] Display Admin Information
[2] Add Patient
[3] Delete Patient
[4] Add Doctor
[5] Delete Doctor
[6] View all patient
[7] View all doctor
[8] Return
Please enter your choice: 3
```

Next, we're going to choose option '3'.

```
=====
=          Delete Patient Page          =
=====
1. Patient: Mahmud
2. Patient: Mazenah
3. Patient: Adelia Delisha
4. Patient: Izzara Raisya

Enter the index that you want to delete: 2

Deleteing patient information. Please wait
Press Enter to continue...

Patient has been deleted successfully
Press Enter to continue...  
■
```

Admin can choose to delete any one of these patients from the system. Let's say the admin wants to delete patient 2.

Here is the information about Mahmud
Patient name : Mahmud
Age : 19
Gender : Male
Address : Selangor
Patient ID : P001
Insurance : HSBC Life

Medical Record History
Medical Record ID : R001
Diagnosis : Fever
Tests : Surgery
Notes : Sever

(2)

Moving on, we're going to choose the next user which is to log in as the Patient.

```
=====
=           Patient Login Page          =
=====
Patient ID : P001
Password   : P0011234

Login Successful. Redirecting to the Dashboard. Please wait
Press Enter to continue...
```

If the patient ID and the password is correct, the patient can login. Note that the password is concatenated with the patient ID, making each password unique for every patient.

```
=====
=           Welcome to the Patient Page          =
=====
Here is the list of what the patient can do
[1] Display Patient Information
[2] Schedule Appointment
[3] Return
Please enter your choice: 1
```

Above is the list of functions that the patient can do. Firstly, we're going to display the patient information of the patient logged in, which is patient P001.

```
=====
=          Personal Information Page      =
=====

    Here is the information about Mahmud
Patient name : Mahmud
Age          : 19
Gender       : Male
Address      : Selangor
Patient ID   : P001
Insurance    : HSBC Life

    Medical Record History
    Medical Record ID : R001
    Diagnosis        : Fever
    Tests             : Surgery
    Notes            : Sever

Press Enter to continue...
■
```

This is the personal information page of the patient P001. It includes all of the patient's personal details, including his or her medical record history (if any).

```
=====
=          Welcome to the Patient Page      =
=====

Here is the list of what the patient can do
[1] Display Patient Information
[2] Schedule Appointment
[3] Return
Please enter your choice: 2■
```

Next, we're going to go for choice '2' to schedule an appointment for the patient.

```
=====
=                      Schedule Appointment                  =
=====

Enter the date (MM/DD/YYYY) : 04/23/2023
Enter the time (HH:MM)      : 08:23
Available Doctors:
    1. Ali
    2. Dr. Nadia

Enter the number of the doctor: 2

Available Rooms:
    1. Room No.: R001
    2. Room No.: R002
    3. Room No.: R003

Enter the number of the room: 2
Scheduling the appointment. Please Wait

Appointment scheduled successfully!
Press Enter to continue...
■
```

To schedule the appointment, the patient has to enter the date and time, and choose which Doctor and Room that they prefer. The system only displays the doctor and rooms which are available at that time.

```
=====
=                      Welcome to the Patient Page           =
=====

Here is the list of what the patient can do
[1] Display Patient Information
[2] Schedule Appointment
[3] Return
Please enter your choice: 3■
```

Lastly, choice ‘3’ is to return to the user login page.

4.4 Doctor Functions

```
=====
=          Doctor Login Page          =
=====

Doctor ID    : D003
Password     : D0031234

Login Successful. Redirecting to the Dashboard. Please wait
Press Enter to continue...
|
```

If the doctor ID and the password is correct, the doctor can login. Note that the password is concatenated with the doctor ID, making each password unique for every doctor.

```
=====
=          Welcome to the Doctor Page          =
=====

Here is the list of what the doctor can do
[1] Create Medical Records
[2] View Medical Records
[3] Update Medical Records
[4] Delete Medical Records
[5] Return
Please enter your choice: 1|
```

In the doctor dashboard, the system will display the functions that the doctor can access to. Here, we'll start with choosing '1'.

```
=====
=          Create Medical Record          =
=====

Enter Record ID : MC004
Enter Diagnosis : Headache
Enter Tests     : Normal Checkup
Enter Notes     : Panadol

Medical Record created successfully!
Press Enter to continue...
|
```

To create a medical record, the doctor are required to enter the information of the medical record before creating a new medical record.

```
=====
=           Welcome to the Doctor Page           =
=====
Here is the list of what the doctor can do
[1] Create Medical Records
[2] View Medical Records
[3] Update Medical Records
[4] Delete Medical Records
[5] Return
Please enter your choice: 2
```

Next, we're going to go for choice '2' to view medical records.

```
=====
=           Medical Record Operations           =
=====

Record ID   : MC004
Diagnosis   : Headache
Test        : Normal Checkup
Notes       : Panadol

No Appointments scheduled for the patient.
```

Press Enter to continue...

Currently, this is the medical record for the patient which has just been created.

```
=====
=           Welcome to the Doctor Page           =
=====
Here is the list of what the doctor can do
[1] Create Medical Records
[2] View Medical Records
[3] Update Medical Records
[4] Delete Medical Records
[5] Return
Please enter your choice: 3
```

Next, we're going to go for choice '3' to update medical records stored in the system.

```
=====
=          Update Medical Record          =
=====

Enter new Diagnosis : Migraine
Enter new Tests     : MRI scan
Enter new Notes     : Triptans

Medical Record updated successfully!
Press Enter to continue...
|
```

The doctor can update the medical record if there are any errors while checking up on the patient.

```
=====
=          Medical Record Operations          =
=====

Record ID   : MC004
Diagnosis   : Migraine
Test        : MRI scan
Notes       : Triptans

No Appointments scheduled for the patient.
Press Enter to continue...
|
```

Then, when the doctor presses on to view the medical record again, the medical record is now updated to the latest one.

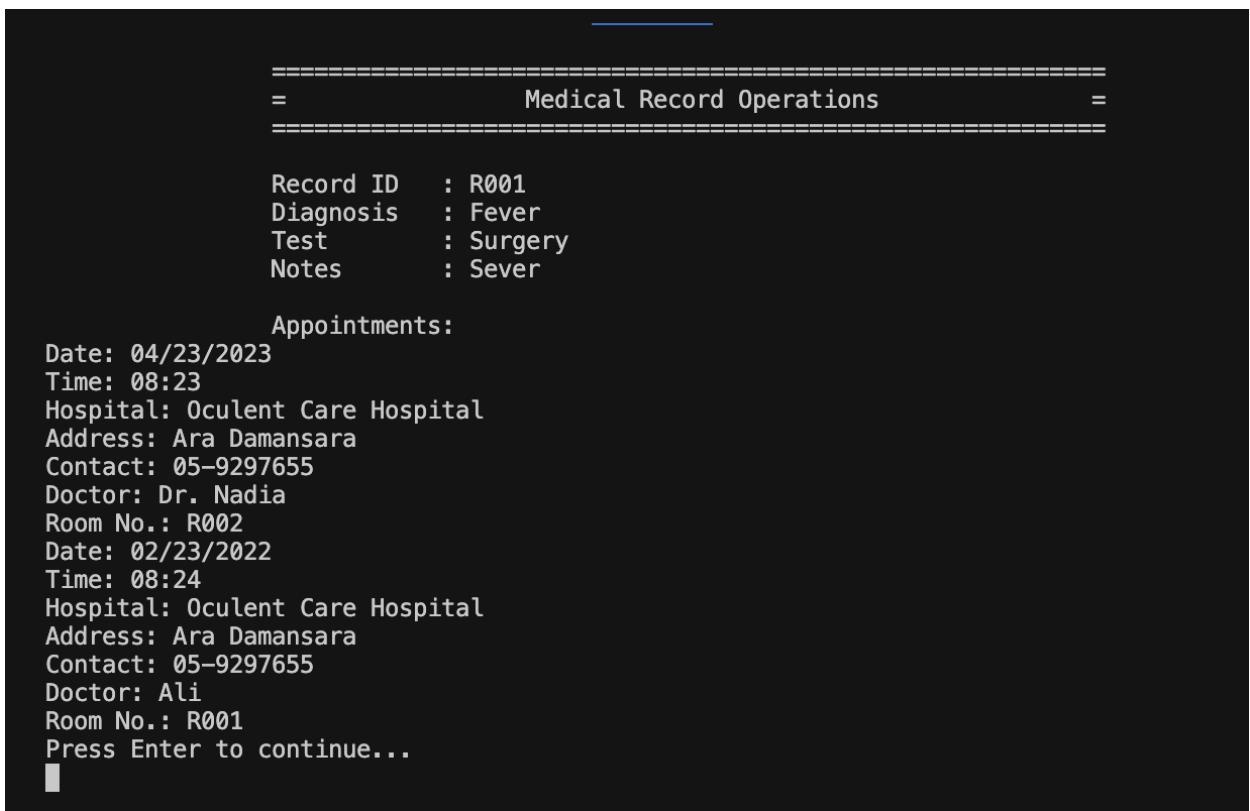

```
=====
=          Welcome to the Doctor Page          =
=====

Here is the list of what the doctor can do
[1] Create Medical Records
[2] View Medical Records
[3] Update Medical Records
[4] Delete Medical Records
[5] Return
Please enter your choice: 4|
```

Lastly, the doctor can also choose to delete the medical record of the patient.

When the medical record is deleted, this is what will be displayed on the screen.

However, if there is an appointment scheduled, the doctor can see all of the details required, making it easier for the doctor to book their own time.

```

```

This marks the end of our Hospital Management System.

5. Conclusion

In conclusion, the Java mini project successfully achieved its goals of serving as a Hospital Management System. The effective administration of patient medical records is one noteworthy accomplishment. A patient's medical history can be completely and accurately documented because of the ability of doctors to create, access, amend, and delete medical records. This skill enables doctors to deliver individualised treatment regimens based on current knowledge and to make well-informed decisions.

Another notable result is the addition of appointment scheduling features. Based on their preferences for time, date, and availability, patients can simply make appointments with doctors. The seamless tracking of medical records is an important result. Since each patient's medical record is connected to their profile, doctors can access and edit important data like diagnoses, results of tests, and notes. This feature encourages continuity of care and makes it easier to provide patients with individualised care based on their medical histories.

Comprehensive hospital and room management features are also included in the system. Doctors and patients can see which rooms are available while making an appointment thanks to the system's storage of hospitals and their corresponding rooms. This feature enables effective room allocation and maximises resource utilisation. The user interface is also made to be user-friendly, clean and well-organized.

Overall, the Java mini project has been successful in achieving its goals of offering a safe, effective, and user-friendly platform for storing medical records, making appointments, and getting access to crucial healthcare data. The successes show the system's capacity to improve patient care, streamline healthcare procedures, and boost healthcare institutions' general operational effectiveness.
